

Pimpri Chinchwad Education Trust's

## **PIMPRI CHINCHWAD COLLEGE OF ENGINEERING**

**SECTOR NO. 26, PRADHIKARAN, NIGDI, PUNE 411044**

**(An Autonomous Institute Approved by AICTE and Affiliated to SPPU, Pune)**

### **Curriculum Structure & Syllabus**

**Of**

**First Year B. Tech. Information Technology**

**(Regulations 2026)**

**Effective from Academic Year 2026-27**

## **Institute Vision**

To be one of the top 100 Engineering Institutes of India in coming five years by offering exemplarily Ethical, Sustainable and Value Added Quality Education through a matching ecosystem for building successful careers.

## **Institute Mission**

1. Serving the needs of the society at large through establishment of a state-of-art Engineering Institute.
2. Imparting right Attitude, Skills, and Knowledge for self-sustenance through Quality Education.
3. Creating globally competent and Sensible engineers, researchers and entrepreneurs with an ability to think and act independently in demanding situations.

## **EOMS Policy**

“We at PCCOE are committed to offer exemplarily Ethical, Sustainable and Value Added Quality Education to satisfy the applicable requirements, needs and expectations of the Students and Stakeholders.

We shall strive for technical development of students by creating globally competent and sensible engineers, researchers and entrepreneurs through Quality Education.

We are committed for Institute’s social responsibilities and managing Intellectual property.

We shall achieve this by establishing and strengthening state-of-the-art Engineering Institute through continual improvement in effective implementation of Educational Organizations Management Systems (EOMS).”

# **Curriculum**

## **Semester I**

<b>Program:</b>	<b>B. Tech. (Information Technology)</b>				<b>Semester: I</b>			
<b>Course:</b>	<b>Linear Algebra &amp; Univariate Calculus</b>				<b>Code:</b>	<b>BSH31BS01</b>		
<b>Credits</b>	<b>Teaching Scheme (Hrs./Week)</b>				<b>Evaluation Scheme and Marks</b>			
	<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Other</b>	<b>CIE</b>		<b>SA</b>	<b>Total</b>
					<b>FA1</b>	<b>FA2</b>		
<b>2</b>	<b>2</b>	<b>-</b>	<b>-</b>	<b>1</b>	<b>10</b>	<b>10</b>	<b>30</b>	<b>50</b>
<b>Prior knowledge of</b>								
1. Elementary Mathematics.								
2. Elementary Calculus.								
<b>Course Objectives:</b> This course aims at enabling students,								
1. To strengthen the concept of univariate calculus and mathematical modeling of physical systems using ordinary differential equations.								
2. To get acquainted with advanced techniques for solving problems related to calculus and ordinary differential equations.								
<b>Course Outcomes:</b> After learning the course, the students should be able to:								
1. Apply the concept of linear algebra to the system of linear equations, linear dependence of vectors, eigenvalues, and eigenvectors.								
2. Use successive differentiation in indeterminate forms, Taylor's and Maclaurin's expansions.								
3. Solve first-order differential equations and higher-order linear differential equations.								
4. Apply first-order differential equations and higher-order linear differential equations to solve problems involving growth and decay, electrical circuits, and one-dimensional heat flow.								
<b>Detailed Syllabus</b>								
<b>Unit</b>	<b>Description</b>							<b>Duration [Hrs]</b>
I	<b>Matrices:</b> Rank, system of linear equations with applications in electrical circuits, linear dependence and independence, linear transformations, eigenvalues, and eigenvectors.							8
II	<b>Differential Calculus:</b> exponential indeterminate forms, Taylor's series, Maclaurin's series, successive differentiation, and Leibnitz's theorem.							7
III	<b>Ordinary Differential Equations:</b> Exact differential equations and differential equations reducible to exact form. <b>Applications:</b> Growth and decay, Kirchoff's law of electrical circuits (L-R and R-C circuits), and one-dimensional conduction of heat (steady state).							8
IV	<b>Linear Differential Equations:</b> Linear differential equation of nth order with constant coefficients, General method, Shortcut methods, Method of variation of parameters, Application of linear differential equations in engineering, viz., mass-spring system, electrical circuits, etc.							7
<b>Total</b>							<b>30</b>	
<b>Text Books:</b>								
1. Higher Engineering Mathematics by B.V. Ramana , 34e, Tata McGraw-Hill.								
2. Advanced Engineering Mathematics, by Peter V. O'Neil, 7e, Thomson Learning.								

**Reference Books:**

1. Advanced Engineering Mathematics by Erwin Kreyszig, 9e, Wiley Eastern Ltd.
2. Advanced Engineering Mathematics by S.R.K. Iyengar, Rajendra K. Jain, 4e, Alpha Science International, Ltd.
3. Advanced Engineering Mathematics by M. D. Greenberg, 2e, Pearson Education.
4. Higher Engineering Mathematics by B. S. Grewal, 43e, Khanna Publication, Delhi

<b>Prior knowledge:</b>							
1. Elementary Algebra. 2. Elementary Calculus							
<b>Course Objectives:</b> This course aims to enable students,							
1. Apply open-source software to solve engineering problems involving matrices, differential calculus, and ordinary differential equations. 2. Develop skills in applying mathematical concepts to solve real-world problems through project implementation.							
<b>Course Outcomes:</b> After learning the course, the students will be able to:							
1. Develop programs for matrices, differential calculus, and ordinary differential equations. 2. Develop project using relevant mathematical concepts to address societal issues.							
<b>Detailed Syllabus</b>							
<b>Expt. No.</b>	<b>List of Experiments using open source software-(16 hrs.)</b>						
1	Conversion of matrices into systems of linear equations.						
2	Conversion and solution of systems of linear equations into matrix form.						
3	Determine linear dependence/independence of vectors and compute eigenvalues and eigenvectors.						
4	Evaluation of Indeterminate Forms.						
5	Expand functions using Taylor's and Maclaurin's series.						
6	Perform successive differentiation of functions.						
7	Solve exact and non-exact differential equations.						
8	Solve higher-order linear differential equations.						
9	Apply differential equation techniques to determine current or charge in electrical circuits.						
10	Apply differential equation methods to analyze temperature distribution based on Fourier's Law of heat conduction.						

Mini Project\* - (14 hrs.)

**\*Mini Project Guidelines:**

Students must prepare a mini-project based on topics such as matrices, differential calculus, ordinary differential equation, linear differential equation, or other relevant mathematical concepts.

**General Guidelines:**

1. The project group should consist of not more than 4 students per group.
2. The project report should include mathematical analysis or applications, and, where applicable, software performance parameters.
3. The project output must be submitted in the prescribed standard format.

<b>Prior knowledge of:</b>								
<ol style="list-style-type: none"> <li>1. Atoms, molecules and nuclei.</li> <li>2. Current, electricity and magnetism.</li> <li>3. Electromagnetic induction.</li> </ol>								
<b>Course Objectives:</b> This course aims at enabling students,								
<ol style="list-style-type: none"> <li>1. Build a strong conceptual understanding of Semiconductor Physics, and Quantum Physics.</li> <li>2. Introduce recent advances in Physics, including Nanotechnology, Superconductivity and Lasers, Quantum computing</li> <li>3. Create awareness of the role of Physics principles in various engineering applications.</li> </ol>								
<b>Course Outcomes:</b> After learning the course, the students should be able to:								
<ol style="list-style-type: none"> <li>1. Illustrate electrical behavior of solids using band theory and charge carriers</li> <li>2. Apply laser and optical fibre principles to their working and engineering applications</li> <li>3. Analyse quantum behaviour of particles using wave-particle duality and the Schrödinger equation</li> <li>4. Use principles of quantum computing to represent quantum states and basic operations</li> <li>5. Apply concepts of magnetism and superconductivity to magnetic behaviour, phase transitions, and superconducting phenomena with their applications</li> <li>6. Describe the properties, synthesis methods, and applications of nanomaterials in modern technologies.</li> </ol>								
<b>Detailed Syllabus</b>								
<b>Unit</b>	<b>Description</b>							<b>Duration [Hrs.]</b>
I	<b>Semiconductor Physics</b> Formation of bands in solids, electrical conductivity of conductors (qualitative) and semiconductors (intrinsic and extrinsic with derivation), Hall effect (with derivation) and its applications, Fermi level in metal and semiconductors, Fermi Dirac probability distribution function (at $T=0K$ and $T>0K$ ), position of Fermi level (intrinsic and extrinsic), variation of Fermi level with temperature and doping concentration, working of PN junction diode on the basis of energy band diagram, solar cell (principle, working, IV characteristics)							8
II	<b>Laser &amp; Fiber Optics</b> Laser: Introduction, interaction of light with matter- absorption, spontaneous emission, stimulated emission, population inversion, metastable state, active system, resonant cavity, characteristics of laser, semiconductor hetero-junction laser, carbon dioxide laser, applications of laser-industrial, defense & medical; introduction to holography Fiber Optics: Propagation of light in optical fibers, acceptance angle, numerical aperture, modes of propagation, types of fibers- step index, graded index, single mode & multi-mode, losses- attenuation, dispersion, application of optical fiber in communication system							7

III	<p><b>Quantum Mechanics</b> Wave particle duality of radiation and matter, de Broglie hypothesis, de Broglie wavelength in terms of kinetic energy, concept of wave packet, phase and group velocity (definition), properties of matter waves, Heisenberg's uncertainty principle, wave function and its physical significance, normalization condition, well behaved wave function, Schrödinger's time independent wave equation, applications of independent wave equation to the problem of (i) particle in rigid box, (derivation for energy and wave function), (ii) particle in non-rigid box (qualitative). tunneling effect</p>	8
IV	<p><b>Quantum Computing</b> Mathematical tools for Quantum computing (complex numbers, Dirac notations, linear algebra, matrix, and probability), inner product, outer product, orthogonality and orthonormality classical bits, qubits- physical realization of superconducting qubits and other architectures, classical gates, Bloch sphere representation of states, quantum computation: single qubit gates, multiple qubit gates, superposition, entanglement, no cloning theorem, bell states and creating bell states, quantum interference, quantum teleportation</p>	7
V	<p><b>Magnetism and Superconductivity</b> Magnetism: Classification of magnetic materials, temperature dependent magnetic transitions (Curie and Neel temperature), magnetic hysteresis loop, magnetic hysteresis loop, giant magneto-resistance (GMR), magneto caloric effect (only statement), adiabatic demagnetization. Superconductivity: Introduction, critical temperature, properties of superconductors (zero electrical resistance, persistent current, Meissner effect, critical magnetic field, isotope effect), BCS theory, type I and II superconductors, low Tc and high Tc superconductors, Josephson effect, DC-SQUID-construction, working and applications, applications - superconducting magnets, maglev trains</p>	8
VI	<p><b>Introduction to Nanoscience</b> Introduction, surface to volume ratio, quantum confinement, properties of nanomaterials- optical, electrical, mechanical, magnetic; methods of preparation of nanomaterials- bottom-up and top-down approaches, physical methods- high energy ball milling, physical vapor deposition; chemical method - colloidal route for synthesis of gold nanoparticle, applications of nanomaterials in medical, energy, automobile, space, defense; sensors, nanoparticles as optoelectronic devices</p>	7
<b>Total</b>		<b>45</b>
<p><b>Text Book</b> 1. A Textbook of Engineering Physics – M.N. Avadhanulu &amp; P.G. Kshirsagar 2. Optics and Photonics – R. Murugesan, S. Chand 3. Concepts of Modern Physics – Arthur Beiser, McGraw-Hill (Indian Edition) 4. Nanotechnology: Principles and Practices – Sulabha K. Kulkarni, Springer</p>		

**Reference Book**

1. Laser Fundamentals – William Silfvast, Cambridge University Press (India edition)
2. Optical Fiber Communications – Gerd Keiser, McGraw-Hill India
3. Introduction to Quantum Mechanics – David J. Griffiths, Pearson India
4. Quantum Mechanics – G. Aruldas, PHI Learning
5. Fundamentals of Physics- Resnick & Halliday (John Wiley &sons)
6. Nanoscience and Nanotechnology – M.S. Ramachandra Rao, Wiley India
7. Introduction to Superconductivity – Michael Tinkham, Dover India Edition
8. Quantum Computation and Quantum Information by Michael A. Nielsen and Isaac L. Chuang, Cambridge publication

<b>Program:</b>	<b>B. Tech. (Information Technology)</b>				<b>Semester:</b>	<b>II</b>		
<b>Course:</b>	<b>Engineering Physics Laboratory</b>				<b>Code:</b>	<b>BSH31BS04</b>		
<b>Credits</b>	<b>Teaching Scheme (Hrs./Week)</b>				<b>Evaluation Scheme and Marks</b>			
	<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Other</b>	<b>TW</b>	<b>OR</b>	<b>PR</b>	<b>Total</b>
<b>1</b>	-	<b>2</b>	-	-	<b>50</b>	-	-	<b>50</b>

**Prior Knowledge of**

1. Basic concepts of optics (reflection, refraction, interference, diffraction).
2. Fundamentals of semiconductor physics (band gap, carriers, conductivity).
3. Basic electricity and magnetism (current, voltage, magnetic fields).
4. Fundamental knowledge of mechanics and sound waves

**Course Objectives:** This course aims to,

1. Enable students to apply and analyse principles of optics, acoustics, semiconductor, and magnetism through systematic experimentation and measurement.
2. Develop the ability to analyse and interpret experimental data to draw valid conclusions.

**Course Outcomes:**

1. Analyse optical and acoustic parameters of materials using experimental methods
2. Interpret electrical properties of semiconductors and the magnetic susceptibility of a paramagnetic solution using experimental methods

<b>Expt. No.</b>	<b>Detailed List of Experiment [Any 10]</b>
1	Newton's Rings (To determine the radius of curvature of Plano-convex lens )
2	Diffraction Grating (To determine the wavelength of different colours)
3	Double Refraction: Birefringence (To determine refractive indices and type of crystal)
4	LASER (To determine the grating element using LASER)
5	Malus Law (To verify the Malus Law of polarization of light)
6	Ultrasonic Interferometer (To determine the compressibility of given liquid)
7	Solar Cell (To determine Fill Factor using IV characteristics)
8	Energy Band Gap (To determine band gap of given semiconductor)
9	Four Probe Method (To determine the energy band gap & resistivity of a given sample)
10	Hall effect (To determine the Hall coefficient, mobility and charge carrier in a given semiconductor)
11	Quincke's method (To determine the magnetic susceptibility of MnSO <sub>4</sub> solution)
12	Sound Absorption Coefficient (To determine the sound absorption coefficient of the given materials)
13	Optic Fibre Cable (To determine the numerical aperture and acceptance angle)

**Reference Books:**

1. Lasers & nonlinear Optics-B. B. Laud-Third edition, New Age International (P)Ltd. Publishers.
2. Fundamentals of Optics- Francis A. Jenkins, Harvey E. White, Fourth edition, McGraw Hill Education Pvt. Ltd.
3. Experiments in Engineering Physics – M.N. Avadhanulu, A.A. Dani, P.M. Pokley,S Chand Publisher.
4. Introduction to solid states Physics - Charles Kittel, Eighth Edition, Wiley India Pvt Ltd.
5. Engineering Physics Laboratory Manual – Jayaraman,Pearson Education Publisher

					<b>FA1</b>	<b>FA2</b>		
2	2	-	-	1	10	10	30	50
<b>Prior knowledge of:</b> Logic gates & Boolean algebra is essential.								
<b>Course Objectives:</b>								
<ol style="list-style-type: none"> <li>1. To understand basic digital design techniques.</li> <li>2. To design combinational and sequential logic circuits.</li> </ol>								
<b>Course Outcomes:</b> After learning the course, the students will be able to:								
<ol style="list-style-type: none"> <li>1. Illustrate basics of number systems conversions and binary arithmetic.</li> <li>2. Apply Boolean expressions and K-Maps to solve logic design.</li> <li>3. Construct Combinational logic circuits.</li> <li>4. Design Sequential circuits using flip flops.</li> </ol>								
<b>Detailed Syllabus</b>								
<b>Unit</b>	<b>Description</b>							<b>Duration (Hrs)</b>
I	<b>Number System and Codes</b> <i>Number Systems:</i> Binary, Octal, Hexadecimal and their conversions, signed binary number representation, 1's and 2's complement representation and arithmetic. <i>Codes:</i> BCD, Excess-3, Gray code, Binary Code and their conversion							7
II	<b>Boolean Algebra and Logic Minimization</b> Boolean algebra, basic theorems and properties of Boolean algebra, Boolean functions, Logic Gates, Logic Functions: SOP form, POS form. <i>Logic minimization:</i> Representation of truth-table, SOP form, POS form, K-Maps up to 4 variables, don't care condition, Use of AI tool Logic Drawer to solve K-Map.							8
III	<b>Combinational Logic Design</b> <b>Combinational Circuit Design:</b> Code Converters, Adders, Subtractors, 4-bit BCD adder, Multiplexer, De-multiplexer (Cascade Method), Decoder, Encoder.							6
IV	<b>Sequential Logic Design</b> <i>Introduction to sequential circuits:</i> Difference between combinational and sequential circuits; Memory element-Latch. Flip- Flops: Logic diagram, truth table & excitation table of SR, JK, D, T flip flops; Conversion from one FF to another. <i>Application of Sequential Circuits:</i> Counters- Asynchronous Counter, Synchronous Counter, BCD Counter, Modulus N counter. <b>Registers:</b> SISO, SIPO, PISO, PIPO, Shift Registers.							9
<b>Total</b>							<b>30</b>

**Prior knowledge of:** Basic Mathematics concepts is essential

**Course Objectives:**

1. To understand and apply fundamental mathematical concepts.
2. To analyze and solve problems using concepts of sets, probability, relations, and functions.
3. To model and interpret problems using trees and graph structures.

**Course Outcomes:** After learning the course, the students will be able to:

1. Solve the problem using sets theory and propositions.
2. Compare relations and functions for solving computational problems.
3. Apply permutation and combination principles for problem solving.
4. Make use of the concepts of trees to address computational problems.
5. Apply concepts of graph theory to solve real-world problems.
6. Select appropriate algebraic structure to solve problems.

**Detailed Syllabus**

<b>Unit</b>	<b>Description</b>	<b>Duration (Hrs)</b>
I	<b>Sets And Propositions</b> Sets: Sets, Cartesian Product, Principle of Inclusion and Exclusion, Mathematical Induction. Propositions: Propositions, Logical Connectives, Propositions, Logical Equivalence, Predicates and Quantifiers.	6
II	<b>Relations &amp; Functions</b> Relations: Properties of Binary Relations, Closure of Relations, Equivalence Relations, Partitions, Warshall's Algorithm, Partial Ordering Relations. Functions: Functions, Composition of Functions, Invertible Functions	8
III	<b>Discrete Probability</b> Basic Counting Techniques, Permutations, Combinations, Binomial Co-efficient, Discrete probability, Conditional Probability, Bayes Theorem, Pigeonhole and Generalized Pigeonhole Principle.	8
IV	<b>Trees</b>	8

	Trees: Tree Terminologies, Rooted Trees, Properties, Applications of Tree, Introduction to tree- Binary Tree, Binary Search Tree, Spanning Trees, Minimum Spanning Tree: Prims and Kruskals Algorithm, Tree Traversals- In-Order, Pre-Order and Post-Order.	
V	<b>Graph Theory</b> Graphs: Basic Terminologies, Types of Graph, Representation of Graph, Paths, Circuits, Hamiltonian and Eulerian graphs, Planar Graphs, Dijkstra’s Algorithm, Concept of Graph Coloring, Concept of Travelling Salesman Problem.	8
VI	<b>Algebraic Structures</b> Algebraic Structures: Need and applications of Algebraic Structures Semigroup, Monoid, Group, Abelian Group, Permutation Groups, Ring, Field.	7
<b>Total</b>		<b>45</b>

<b>Prior knowledge of:</b> Boolean algebra is essential.								
<b>Course Objectives:</b>								
<ol style="list-style-type: none"> <li>1. Realize Boolean functions using gates</li> <li>2. Design combinational and sequential logic circuits.</li> </ol>								
<b>Course Outcomes:</b> After learning the course, the students will be able to:								
<ol style="list-style-type: none"> <li>1. Demonstrate the Boolean expressions using basic and universal logic gates.</li> <li>2. Construct Combinational logic circuits.</li> <li>3. Design Sequential logic circuits using Flip-Flops.</li> </ol>								
<b>Guidelines:</b>								
<ol style="list-style-type: none"> <li>1. Continuous assessment of laboratory work will be based on parameters such as experimental write-up, laboratory assignments performance, punctuality and overall behavior of students etc.</li> <li>2. Following is the list of suggested assignments; course teachers can take any 12 from the list.</li> <li>3. Micro project assessment will be based on Understanding of Project Topic, design, Implementation, Demonstration and Team Work, technical etc.</li> <li>4. Note for Faculty: Teaching faculty are instructed to connect the following digital electronics laboratory assignments with concepts related to microprocessors/CPU.</li> </ol>								
<b>Detailed Syllabus</b>								
<b>Assignment No.</b>	<b>Suggested List of Assignments</b>							
1	Design and implementation of Boolean functions through the realization of logic gates.							
2	Design and implement 4-bit BCD to Excess-3 code converter							
3	Design and implement 4-bit Excess-3 to BCD code converter							
4	Design and implement 4-bit Binary to Gray code converter							
5	Design and implement 4-bit Gray to Binary code converter							
6	Implement Full Adder / Subtractor using <ol style="list-style-type: none"> <li>1. Basic Gates.</li> <li>2. Universal Gates.</li> </ol>							
7	Design and implement following using Multiplexer (IC-74153, 74151) <ol style="list-style-type: none"> <li>1. Full Adder</li> <li>2. Variable logic function(s) (cascade method).</li> </ol>							

8	Design and implement following using De-Multiplexer (IC-74138) 1. Full Adder 2. Variable logic function(s) (cascade method).
9	Design and implement Encoder or Decoder (Encoder-IC 74148,Decoder- IC 74138)
10	Design and implement Asynchronous counter using MS-JK flip flop (IC-7476) 1. n bits Up counter 2. n bit Down counter
11	Design and implement 3 bit asynchronous controlled up/down counter using MS-JK flip flop.
12	Design and implement Synchronous counter using MS-JK flip flop-(IC-7476) 1. n bits Up counter 2. n bit Down counter
13	Design Full Adder/Full Subtractor circuit using basic logic gates with the help of an AI tool and verify Truth Table manually with implementation on Digital Trainer Kit.
14	Design and implement Modulo 'N' counter using IC7490.
15	Design and simulate BCD Counter in a virtual lab using a simulator.
16	Implement a Micro Project using all the concepts of Logic Design
<p><b>* Micro Project</b> The objective of micro project is to apply the concepts such as logic gates, flip-flops, or sequential logic to design and develop a digital circuit or system to solve real world problems The micro project must be done in a group of 3-5 students and choose a project topic aligned with course content. Sample micro project:</p> <ol style="list-style-type: none"> <li>i. Digital Clock</li> <li>ii. Frequency Counter</li> <li>iii. Traffic Light Controller</li> <li>iv. Soil Moisture Detector</li> <li>v. Digital Thermometer</li> <li>vi. Password-protected Door Lock</li> <li>vii. LED Cube</li> <li>viii. LCD Message Scroll</li> </ol>	
<p><b>Reference Books:</b></p> <ol style="list-style-type: none"> <li>1. John Yarbrough, Digital Logic applications and Design, Cengage Learning, ISBN – 13: 978-81-315-0058-3</li> <li>2. William Stallings, “Computer organization and architecture, designing for performance” ,Prentice Hall, Eighth edition.</li> </ol>

<b>Program:</b>	<b>B. Tech. (Information Technology)</b>				<b>Semester:</b>	<b>I</b>		
<b>Course:</b>	<b>Web Development Laboratory</b>				<b>Code:</b>	<b>BIT31VS01</b>		
<b>Credit</b>	<b>Teaching Scheme (Hrs./Week)</b>				<b>Evaluation Scheme and Marks</b>			
	<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Other</b>	<b>TW</b>	<b>PR</b>	<b>OR</b>	<b>Total</b>
<b>2</b>	<b>-</b>	<b>4</b>	<b>-</b>	<b>-</b>	<b>100</b>	<b>-</b>	<b>-</b>	<b>100</b>

**Prior knowledge of:**

1. Basic computer literacy, including familiarity with file handling and use of web browsers.
2. Fundamental understanding of internet concepts such as websites, web pages, and URLs (no prior programming knowledge required).

**Course Objectives:**

1. To design visually appealing and user-friendly web interfaces.
2. To develop interactive websites based on given requirements.

**Course Outcomes:** After learning the course, the students will be able to:

1. Design a webpage using fundamental web programming concepts HTML, CSS, and JavaScript.
2. Use HTML5 elements to create well-structured and semantic web pages.
3. Create intuitive and user-friendly web interfaces.
4. Develop functional websites by integrating structure, styling, and interactivity.

**Detailed Syllabus**

<b>Assignment No.</b>	<b>Suggested List of Assignments (Any 8)</b>
1.	HTML Structure with CSS Design a webpage on any topic of your choice containing: Properly structured paragraphs and at least one image. Use an external CSS stylesheet. Apply alignment, spacing, and basic text styling.
2.	Create a webpage demonstrating different nested list structures: <ul style="list-style-type: none"> <li>• Ordered list within unordered list</li> <li>• Unordered list within ordered list</li> <li>• Ordered list within ordered list using different numbering styles</li> <li>• Unordered list within unordered list using different bullet styles</li> </ul> Use any meaningful scenario such as course modules, project tasks, recipes, or travel plans.
3.	Create a webpage displaying minimum 10 related terms using definition lists on a topic of your choice (e.g., web development, artificial intelligence, networking, or programming).
4.	Images and Hyperlinks Create a webpage that includes: <ul style="list-style-type: none"> <li>• Two images</li> <li>• Apply width and height properties to one image</li> <li>• Align one image to centre and the other to left</li> <li>• Add a hyperlink to another webpage</li> </ul> Use one image as a clickable hyperlink

5.	Create a webpage that contains an image and a short paragraph. Develop an image map where different sections of the image link to different sections or webpages. Apply the image map to the image.
6.	Create a webpage demonstrating HTML5 media elements. Include at least five media or interactive elements such as audio, video, iframe, embed, or figure.
7.	Create a webpage containing a dropdown list with at least five options (e.g., companies, countries, technologies, etc.). When the user selects an option: <ul style="list-style-type: none"> <li>• Display related information beside the dropdown.</li> <li>• Use JavaScript to handle the selection.</li> </ul> Use CSS to style the displayed information (color, font size, bold).
8.	Design a registration form for any organization, event, or club. The form should include fields such as: <ul style="list-style-type: none"> <li>• Name</li> <li>• Address</li> <li>• Birth date</li> <li>• Qualification</li> <li>• Email</li> <li>• Phone number</li> <li>• Gender</li> <li>• Comments</li> <li>• Attach photo</li> </ul> Use appropriate form elements like textbox, textarea, radio buttons, dropdown menu, checkboxes, file upload, submit and reset buttons. <ol style="list-style-type: none"> <li>a. Align all elements using table or CSS layout.</li> </ol>
9.	Design a multi-page static website for any domain (e.g., online bookstore, travel website, course platform). The website should include the following pages: <ul style="list-style-type: none"> <li>• Home Page</li> <li>• Login Page</li> <li>• Catalogue Page (display items in a table)</li> <li>• Registration Page</li> </ul> Ensure proper navigation between pages.
10.	JavaScript String Validation Write a JavaScript program that checks whether the first character of a given string is uppercase or not and displays the result.
11.	Write a JavaScript program that: <ul style="list-style-type: none"> <li>• Iterates numbers from 0 to 15 using a loop.</li> <li>• Checks whether each number is odd or even.</li> </ul> Displays the result on the webpage.
12.	AI-Assisted Webpage Development Use an AI coding assistant such as ChatGPT, GitHub Copilot, or Google Gemini to generate a basic HTML webpage for a topic of your choice.

	<p>Students should:</p> <ul style="list-style-type: none"> <li>• Write the prompt used to generate the webpage.</li> <li>• Generate the initial HTML code using the AI tool.</li> <li>• Modify or enhance the webpage manually by adding CSS styling, images, lists, or additional sections.</li> </ul> <p>Submit:</p> <ul style="list-style-type: none"> <li>• AI prompt used</li> <li>• AI-generated code</li> <li>• Final improved webpage.</li> </ul>
13.	<p>Use an AI tool to generate three different webpage layouts using different prompts.</p> <p>Students should:</p> <ul style="list-style-type: none"> <li>• Write three different prompts.</li> <li>• Compare the generated outputs.</li> <li>• Select the best output and improve the webpage by adding additional HTML/CSS elements.</li> </ul> <p>Submit:</p> <ul style="list-style-type: none"> <li>• Prompts used</li> <li>• Generated outputs</li> <li>• Final improved webpage.</li> </ul>
<p><b>Mini Project</b>  <b>Guidelines for Mini Project:</b>  <b>Develop a website using knowledge of HTML, CSS and validate using JavaScript.</b>  It is appreciated if the web site is based on the concepts learned. Use of open-source software and recent version is to be encouraged. At the end students has to upload on github repository.</p>

<b>Program:</b>	<b>B. Tech. (Information Technology)</b>				<b>Semester:</b>	<b>I</b>		
<b>Course:</b>	<b>Constitution of India</b>				<b>Code:</b>	<b>BSH31VE01</b>		
<b>Credits</b>	<b>Teaching Scheme (Hrs./Week)</b>				<b>Evaluation Scheme and Marks</b>			
	<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Other</b>	<b>FA</b>		<b>SA</b>	<b>Total</b>
					<b>FA1</b>	<b>FA2</b>		
<b>2</b>	<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	<b>25</b>	<b>25</b>	<b>-</b>	<b>50</b>

**Course Objectives:**

1. To introduce students to the fundamental principles, philosophy, and key features of the Indian Constitution.
2. To familiarize students with the structure and functioning of government and key constitutional provisions.
3. To enable students to apply constitutional values, rights, and duties in understanding contemporary issues and responsible citizenship.

**Course Outcomes:** After learning the course, the students will be able to,

1. Explain the fundamental principles and key features of the Indian Constitution, including Preamble, Rights, Duties, and DPSP.
2. Describe the structure and functioning of the Executive, Legislature, and Judiciary, including the law-making process.
3. Illustrate constitutional provisions such as amendments, writs, and citizen mechanisms to address rights and governance issues.
4. Apply constitutional values to evaluate contemporary issues and challenges in civic and professional contexts.

<b>Unit</b>	<b>Description</b>	<b>Duration [Hrs]</b>
I	<p><b>Foundations of the Indian Constitution</b></p> <ul style="list-style-type: none"> <li>● Introduction to the Indian Constitution: brief historical background, making of the Constitution, and its significance</li> <li>● The Preamble: ideals, philosophy, and interpretation</li> <li>● Salient features of the Indian Constitution: sovereignty, secularism, democracy, federalism, and rule of law</li> <li>● Fundamental Rights and Fundamental Duties: concepts and relevance in contemporary society</li> <li>● Directive Principles of State Policy (DPSP): objectives and role in governance</li> <li>● Relationship between Fundamental Rights, Duties, and DPSP</li> </ul>	7
II	<p><b>Structure and Functioning of Government</b></p> <ul style="list-style-type: none"> <li>● Union Executive: President, Vice-President, Prime Minister, and Council of Ministers—roles and functions</li> <li>● Parliament: composition and functioning of Lok Sabha and Rajya Sabha</li> <li>● Legislative process: stages of law-making (bill to act)</li> <li>● Judiciary: structure, independence, and concept of judicial review</li> <li>● Federalism: Centre–State relations and distribution of powers</li> </ul>	8

	<ul style="list-style-type: none"> <li>● State Government: role of Governor and State Legislature (overview)</li> </ul>	
III	<b>Constitutional Mechanisms and Citizen Interface</b> <ul style="list-style-type: none"> <li>● Amendment process of the Constitution and basic structure doctrine</li> <li>● Constitutional bodies: Election Commission of India and Comptroller and Auditor General—roles and functions</li> <li>● Emergency provisions: national, state, and financial emergencies</li> <li>● Constitutional remedies: writs and judicial remedies for protection of rights</li> <li>● Public Interest Litigation (PIL): concept and significance</li> <li>● Introduction to citizen-centric mechanisms: Right to Information (RTI)</li> </ul>	7
IV	<b>Constitution in Contemporary Context</b> <ul style="list-style-type: none"> <li>● Judicial activism and its role in safeguarding constitutional values</li> <li>● Contemporary constitutional issues: freedom of speech, right to privacy, gender justice, and environmental protection</li> <li>● Challenges to constitutional governance: secularism, federalism, and social justice</li> <li>● Recent constitutional developments and amendments</li> <li>● Basic comparative perspective: Indian Constitution and selected global practices</li> </ul>	8

<b>Course:</b>	<b>Communicative English</b>			<b>Code:</b>	<b>BSH31AE01</b>		
<b>Credits</b>	<b>Teaching Scheme (Hrs./Week)</b>			<b>Evaluation Scheme and Marks</b>			
	<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>TW</b>	<b>OR</b>	<b>PR</b>	<b>Total</b>
<b>1</b>	<b>-</b>	<b>2</b>	<b>-</b>	<b>30</b>	<b>20</b>	<b>-</b>	<b>50</b>

**Prior knowledge of:** Basic English communication

**Course Objectives:** This course aims at enabling students to:

1. Strengthen language skills through grammar, vocabulary, and comprehension activities.
2. Enhance students' ability to communicate ideas clearly in written and spoken forms.

**Course Outcomes:** After learning the course, the students will be able to:

1. Interpret key ideas from listening and reading tasks to demonstrate comprehension.
2. Develop structured paragraphs and formal emails using grammar, vocabulary and writing techniques.
3. Organize information into a logical presentation framework to highlight clear and structured oral presentations.

#### Detailed Syllabus

<b>Expt. No</b>	<b>Suggested List of Experiments</b>	<b>Duration (Hrs)</b>
1	<b>Apply Listening for Understanding:</b> Practice listening through IELTS & TOEFL-style audio clips and respond to comprehension-based questions with accuracy.	2
2	<b>Apply Listening for Understanding:</b> Practice listening through audio clips of interviews and podcasts and respond to comprehension-based questions with accuracy.	2
3	<b>Interpret Text through Guided Oral Reading:</b> Read and interpret short story text, <i>The Necklace</i> by Guy De Maupassant with appropriate pronunciation, pauses, and intonation, and answer questions to demonstrate comprehension.	2
4	<b>Apply Analytical Reading Comprehension Techniques:</b> Apply skimming and scanning techniques to understand and interpret unseen passages effectively, for competitive exams.	2

5	<b>Engage in Integrated Comprehension Practice:</b> Listen to audio content and follow the text of Steve Jobs’ speech ‘Stay Hungry, Stay Foolish’ and respond to comprehension questions demonstrating understanding.	2
6	<b>Use Grammar in Context:</b> Use appropriate grammar structures in contextual sentence-building and short communication tasks; Identify and Correct Common Errors.	2
7	<b>Use Functional and Business Vocabulary:</b> Refine Sentence Structures by using appropriate tense, agreement, and sentence patterns to enhance clarity and correctness. Use functional and basic business vocabulary accurately in speaking and writing tasks.	2
8	<b>Practice Note-Taking and Paragraph Writing Skills:</b> Apply note-making techniques to organize ideas and write clear, structured paragraphs. Refine writing style and perform grammar checks with the help of Generative AI tools.	2
9	<b>Apply Email Etiquette and Review Professional Emails:</b> Apply advanced email etiquette by editing and refining emails for clarity, tone, correctness, and professionalism, including peer review and identification of common errors in workplace communication.	2
10	<b>Draft Professional Emails for Workplace Communication:</b> Draft clear and formal emails for internships, job applications, and follow-ups, focusing on appropriate subject lines, structure, tone, and basic professional etiquette.	2
11	<b>Construct Visually Engaging PowerPoint Presentations.</b> Convey ideas concisely in order to create professional decks that support rather than distract from their message.	2
12	<b>Deliver Persuasive Oral Presentations:</b> Practice techniques for maintaining eye contact, vocal variety, managing stage presence and articulating complex ideas clearly to ensure maximum audience engagement and retention.	2
13	<b>Group Discussion Techniques:</b> Examine mock group discussions to see how different roles and structures impact the conversation.	2
14	<b>Express yourself in Group Discussions:</b> Participate in group discussions on technical and general topics, demonstrating clarity, teamwork and communication skills.	2

15	<b>Deliver a Public Speech:</b> Apply voice modulation, paralanguage, and clarity in structured speaking tasks.	2

<p><b>Course Objectives:</b> This course aims at enabling students to:</p> <ol style="list-style-type: none"> <li>1. To help students understand self-awareness, well-being and emotional regulation for personal growth.</li> <li>2. To enable students to practice critical thinking, problem-solving and goal-setting skills for academic and life success.</li> </ol>							
<p><b>Course Outcomes:</b> After learning the course, the students will be able to:</p> <ol style="list-style-type: none"> <li>1. Identify personal strengths, lifestyle habits and well-being practices using self-assessment and reflective activities.</li> <li>2. Use emotional intelligence strategies in dynamic social and academic contexts.</li> <li>3. Apply cognitive thinking and problem-solving strategies to set SMART goals for personal and professional life.</li> </ol>							
<b>Detailed Syllabus</b>							
<b>Expt. No</b>	<b>Suggested List of Experiments</b>						<b>Duration (Hrs)</b>
1.	Developing Self Awareness: Explore personal interests, beliefs, strengths and goals through reflective activities, self-assessment exercises, and group discussions to develop self-understanding.						<b>2</b>
2	Explore Therapeutic Hobbies: Explore creative (art, music, writing) and physical (sports, dance, yoga) hobbies through short activity sessions and reflect on which activities help reduce stress and improve mental clarity.						<b>2</b>
3	Evaluate Holistic Health Habits: Evaluate personal eating patterns and physical activity levels through a lifestyle tracking exercise and design a simple daily routine for healthier living.						<b>2</b>
4	Develop a Personal Well-being Plan: Design a short project outlining a personal well-being strategy that includes hobbies, emotional regulation practices and healthy lifestyle habits.						<b>2</b>

5	Analyze Personal Potential (SWOT Analysis): Analyze personal strengths, weaknesses, opportunities, and threats through a guided SWOT worksheet and group discussion to identify hidden talents and areas for self-improvement.	2
6	Identify Emotional Triggers: Identify situations that cause overthinking, stress, or anxiety by analysing common academic scenarios and discussing emotional responses in small groups.	2
7	Examine Relationship Dynamics: Examine empathy, personal boundaries and attachment styles through role-play activities and reflective discussions on relationship patterns.	2
8	Develop Assertiveness Skills: Develop assertive communication strategies through scenario-based role plays to practice expressing opinions while respecting others.	2
9	Develop Resilience to Peer Pressure: Develop resilience strategies to resist negative peer pressure or addictive behaviours through simulation exercises and discussion of real-life situations.	2
10	Reflect on Personal Learning Journey: Reflect on insights gained from the life skills activities through guided journaling and group sharing to evaluate personal growth.	2
11	Apply Growth Mindset Principles: Apply growth mindset concepts by reflecting on a past failure and reframing it as a learning opportunity through guided journaling and peer discussion.	2
12	Demonstrate Thinking Patterns: Demonstrate convergent and divergent thinking by brainstorming multiple solutions to a simple engineering or real-life problem and analysing the thinking approach used.	2
13	Apply Problem-Solving Frameworks: Apply logical reasoning frameworks to solve case-based academic or ethical problems through structured group problem-solving activities.	2
14	Design SMART Goals: Design personal academic or career goals using the SMART framework and present an action plan to achieve them.	2
15	Present Life Skills Application Project: Present a small group project demonstrating how life skills concepts can be applied to improve personal or academic life.	2
<b>Total</b>		<b>30</b>

<b>Prior knowledge:</b>							
1. Elementary Algebra. 2. Elementary Calculus 3. Basics of Open Source							
<b>Course Objectives:</b> This course aims to enable students,							
1. To equip with the ability to apply open source software for solving engineering problems involving partial differentiation, integral calculus, multiple integrals, and Fourier series. 2. To develop skills in applying mathematical concepts to solve real-world problems through project implementation.							
<b>Course Outcomes:</b> After learning the course, the students will be able to:							
1. Develop programs for partial differentiation, integral calculus, multiple integrals, and Fourier series using open source software. 2. Develop project using relevant mathematical concepts to address societal issues.							
<b>Detailed Syllabus</b>							
<b>Expt. No.</b>	<b>List of Experiments using open source software-(16 hrs.)</b>						
1	Computation of Higher order Partial Derivatives						
2	Evaluation of Maxima and Minima for two variable function						
3	Computation of the Jacobian for Functions of Several Variables						
4	Representation of a periodic function as a Fourier Series						
5	Representation of the Fourier Series through Harmonic Analysis for the given Data						
6	Evaluation of Gamma & Beta function						
7	Evaluation of Integrals using Differentiation Under the Integral Sign (DUIS)						
8	Evaluation of Double and Triple Integrals						
9	Determine the Area of a Region using Double Integrals						
10	Determine the Volume of a Solid using Triple Integrals						

Mini Project\* - (14 hrs.)

**\*Mini Project Guidelines:**

Students must prepare a mini-project based on topics such as partial differentiation, Fourier series, integral calculus, multiple integrals or other relevant mathematical concepts.

**General Guidelines:**

1. The project group should consist of not more than 4 students per group.
2. The project report should include mathematical analysis or applications, and, where applicable, software performance parameters.
3. The project output must be submitted in the prescribed standard format.

					<b>FA1</b>	<b>FA2</b>		
<b>3</b>	<b>3</b>	<b>-</b>	<b>-</b>	<b>1</b>	<b>20</b>	<b>20</b>	<b>60</b>	<b>100</b>

**Prior knowledge of:**

1. Structure of water.
2. Volumetric analysis.
3. Fossil and derived fuels.
4. Corrosion and its effects.
5. Electrochemical series.
6. Classification and properties of polymers
7. Basics of Computers.

**Course Objectives:** This course aims at enabling students,

1. To provide an overview of key computational chemistry methods and their significance in modern chemical research.
2. To familiarize students with instrumental methods for qualitative and quantitative analysis of water and explore the importance of green chemistry.
3. To build consciousness about the recent development in alternative energy sources and batteries
4. To make student acquainted with chemical and electrochemical mechanism of corrosion and corrosion control
5. To lead students to investigate the advancement in engineering materials

**Course Outcomes:** After learning the course, the students should be able to:

1. Apply computational chemistry tools to model molecular structures and properties.
2. Describe the structure, properties and performance of speciality polymers and nanomaterials in technological applications.
3. Analyze water softening techniques and green chemistry principles for environmental sustainability.
4. Use preventive methods of corrosion in real-life problems.
5. Apply fundamentals of fuel combustion and battery technology to assess their energy efficiency.

**Detailed Syllabus**

<b>Unit</b>	<b>Description</b>	<b>Duration [Hrs]</b>
I	<p><b>AI in Engineering Chemistry:</b> For visualising molecules, Understanding DFT, ab initio methods, Hardness &amp; alkalinity calculation, Boiler problem analysis, Green solvent identification, Conducting polymer mechanism, Case study analysis of corrosion, GCV/NCV calculations, Battery reactions (Li-ion, fuel cells) Ethical AI usage. Tools: SMILES, InChI, Wolfram Alpha, ChatGPT, Perplexity AI, Excel + AI, Chem Draw, Molview, Gemini, and Claude.</p> <p><b>Introduction to Computational Chemistry</b></p> <p><b>A] Fundamentals of Computational Chemistry:</b> Definition and scope of computational chemistry, Role in modern chemical research and industry, Overview of computational workflow (input → calculation → output →</p>	10

	<p>interpretation). Tools and Methods in Computational Chemistry: Molecular Mechanics (concept of force fields), Semi-empirical methods (basic idea and applications), Ab initio methods (introductory concept) – basic concept and applications, Comparison of methods (accuracy vs computational cost). Applications: Drug design and discovery, Materials chemistry, Reaction mechanism understanding.</p> <p><b>B  Introduction to Chemo informatics:</b> Definition and importance in chemical data science, Chemical databases: PubChem, ChemSpider (basic navigation and applications), Representation of molecules: SMILES, InChI, Introduction to molecular descriptors and fingerprints.</p>	
II	<p><b>Advanced Engineering Materials and Nanotechnology</b></p> <p><b>A  Advanced Engineering Materials :</b> Conducting Polymers: Characteristics and classification with examples, mechanism of conduction in <i>trans</i>-polyacetylene and applications of conducting polymers, Structure and properties of Biodegradable Polymers: PHBV, Liquid crystal polymer-Kevlar., E waste management.</p> <p><b>B  Nanomaterials:</b> Introduction, classification of nanomaterials based on dimensions, structure, properties and applications of graphene and carbon nanotubes, quantum dots (semiconductor nanoparticles), and their applications in sensors, transistors, energy storage, thin film deposition techniques (nanoparticle synthesis), sustainable nanomaterials.</p>	9
III	<p><b>Water technology &amp; Green Chemistry</b></p> <p>Hardness &amp; alkalinity of water with their estimation. Boiler troubles: Boiler corrosion, Sludges, Scales, and Caustic embrittlement. External treatment methods- Softening of water by Zeolite &amp; ion-exchange processes. Desalination of water – Reverse osmosis. Green Chemistry: 12 principles, Green solvents in PCB &amp; chips cleaning.</p>	9
IV	<p><b>Corrosion Science</b></p> <p>Corrosion: introduction, types of corrosion, mechanism of atmospheric corrosion and wet corrosion. Galvanic series. Factors affecting corrosion: nature of metal and nature of environment. Different types of corrosion: Pitting corrosion, concentration cell corrosion, stress corrosion and soil corrosion. Corrosion control: methods of prevention of corrosion - cathodic and anodic protection, metallic coatings and its types - anodic and cathodic coatings. Methods to apply metallic coatings - hot dipping, cladding, electroplating and cementation. Causes and effects of corrosion – theories of chemical and electrochemical corrosion – mechanism of electrochemical corrosion, Corrosion control methods- Cathodic protection – Sacrificial anode and impressed current methods.</p>	8
V	<p><b>Energy sources and conversion Technologies:</b></p> <p><b>a. Fuel and combustion:</b> Calorific value of fuel – GCV, NCV and its relation. Determination of calorific value - Bomb calorimeter, Boy's calorimeter and numericals. Classification- solid fuels: - Coal. Proximate and ultimate analysis of coal and their significance. Liquid fuels–Crude petroleum and its refining. Gaseous fuels – Hydrogen as future fuel, Alternative fuels: Power alcohol and biodiesel, their synthesis and advantages. Combustion: chemical reactions, calculations on air requirement for combustion.</p>	9

	<b>b. Battery Technology:</b> Electrochemical principles, Li ion, solid state Sodium ion battery, Charging and discharging reaction, fuel cell, battery safety.

**Prior knowledge of**

1. Theory of acids and bases
2. Molarity, normality and molality
3. Titration method
4. Basics of Computer

**Course Objectives:**

1. To help students procure conceptual clarity in engineering chemistry through laboratory experiments.
2. To develop experimental skills that provide insight into societal and environmental issues.
3. To develop basic understanding of computational chemistry.

**Course Outcomes:** After completion of this course, the students will be able to,

1. Apply volumetric and instrumental methods for quantitative and qualitative analysis of materials
2. Demonstrate the process of polymer synthesis and corrosion resistance improvement for metals.
3. Construct 2D molecular structures using ChemDraw and Chem 3D tools.

**Detailed Syllabus**

<b>Expt. No.</b>	<b>List of Experiments</b>
1	Determination of total hardness of water sample by EDTA method.
2	Determination of type of alkalinity of given water sample and extent of alkalinity.
3	To determine Chloride (Cl <sup>-</sup> ) content in given water sample by Argentometric method.
4	To determine the dissociation constant of a weak acid (acetic acid) using a pH meter.
5	Titration of mixture of strong acid with strong base using Conductivity meter and determine strength of acid.
6	Proximate analysis of Coal.
7	To estimate the amount of Fe (II) present in the given solution potentiometrically.
8	To determine the maximum wavelength of absorption of KMnO <sub>4</sub> , verify Beer's law and find concentration of the unknown sample.
9	To perform electroplating of copper for enhancing corrosion resistivity and determination of its electrochemical equivalent (ECE).
10	To prepare the Phenol formaldehyde resin.
11	Molecular Modeling using ChemDraw (Chem3D)

<b>Prior knowledge of:</b> 1. Problem Solving skills are essential.								
<b>Course Objectives:</b> 1. To understand the principles of programming languages and programming paradigms. 2. To gain knowledge of derived and user defined data types. 3. To learn basic concepts of logical and functional programming language.								
<b>Course Outcomes:</b> After learning the course, the students will be able to: 1. Summarize principles of programming languages for understanding design features. 2. Use arrays, pointers, and strings for data manipulation. 3. Apply user-defined data types for structured data representation. 4. Construct functions for modular and reusable programs. 5. Use functional and logical paradigms for problem-solving. 6. Illustrate object-oriented concepts for designing scalable systems.								
<b>Detailed Syllabus</b>								
<b>Unit</b>	<b>Description</b>							<b>Duration (Hrs)</b>
I	<b>Fundamentals of Programming</b> Importance of Studying Programming Languages, History of Programming Languages, Impact of Programming Paradigms, Role of Programming Languages, Programming Environments, Introduction to AI-Assisted Programming. Programming paradigms, Tokens, Data types, Type Conversions. Decision control and loop control structure, Case control structure.							7
II	<b>Array, Pointer and String</b> Array & its types, Address calculations, Pointer: Pointer concept, Array of Pointers, Strings: Built in and User defined functions to length, compare, concatenation, reverse etc.							9
3	<b>Structure and Union</b> Structure and Union: declaration, initialization and accessing members. Array of structure. Union of structure. Additional features of structure. typedef, enumerated data types.							6

4	<b>Functions And Implementations</b> User defined Functions, Definition of function, Call by value and Call by reference, Category of functions: No arguments and no return values, Arguments with return values, no arguments but returns a value, arguments but returns nothing, recursion, Nested Functions, Local and global variables.	8
5	<b>Logical And Functional Programming</b> Functional Programming Paradigm: Basic LISP definitions, predicates, conditionals and scoping, Recursion and iteration, Properties List array and access functions. Logic Programming Paradigm: An Overview of Prolog, Syntax and Meaning of Prolog Programs, Lists, Operators.	8
6	<b>Object Oriented Programming Language Overview</b> Features of OOPs, Classes and objects: class fundamentals, declaring objects, assigning object reference variables, adding methods to a class, returning a value, constructors, this keyword.	7

<b>Prior knowledge of:</b>							
1. Problem Solving Skills are essential.							
<b>Course Objectives:</b>							
1. Write a neat code by selecting appropriate programming constructs.							
2. Impart the concepts like functions, pointers, user defined data types, class and object.							
<b>Course Outcomes:</b> After learning the course, the students will be able to:							
1. Implement conditional statements, loop, array and pointer to solve various problem statements.							
2. Demonstrate various data types and functions.							
3. Apply different concepts of functional and logical programming.							
4. Make use of object-oriented programming concepts to implement programs.							
<b>Guidelines</b>							
<ul style="list-style-type: none"> <li>Continuous assessment of the laboratory is done based on overall performance and laboratory assignments performance of students. Each laboratory assignment assessment will assign marks based on parameters with appropriate weights. Suggested parameters for overall assessment as well as each laboratory assignment assessment include - Neatness and cleanliness in Experimental write-up, Efficient Code, algorithm, program code, Interpretation of results and conclusions, Punctuality, Overall behavior, attitude and performance.</li> <li>Micro project assessment will be based on understanding problem statements, technical skills, implementation, team work, etc.</li> </ul>							
<b>Assignment No.</b>	<b>Suggested List of Assignments</b> (Any 10, Assignment No-16 is Compulsory)						
1	Write a program to accept marks of five courses and if a student is passed then find the grade obtained by the student. If student scores aggregate greater than 75%, then the grade is distinction. If aggregate is $60 >$ and $< 75$ then the grade is first division. If aggregate is $\geq 50$ and $< 60$ then the grade is second division. If aggregate is $\geq 40$ and $< 50$ then the grade is third division.						
2	You are developing a simple ATM simulation system. The program should display a menu with options like checking balance, depositing money, and withdrawing money. Based on the user's choice, the program should perform the required operation. The system should continue to run until the user selects the exit option. Write a program using basic control structures, branching, and looping to implement this functionality.						
3	Write a program that takes a number as input from the user and checks whether the entered number is prime. Display an appropriate message based on the result.						

4	Write a program to accept n number of elements from user (where, n is specified by user) and stores data in an array and display the largest element of that array using loops.
5	A class teacher wants to keep a record of 10 students in the class along with the names and marks obtained in 5 subjects. Write a C program with structure that displays: a) Overall percentage result of the class. b) Total number of passing students in the class. c) Total number of students failing in one subject. d) Total number of distinctions in the class.
6	a) Write a program to generate Fibonacci series with and without using recursive function. b) Write a program to find the factorial of a number with recursion.
7	Write a program that defines functions to swap two elements using call by value and call by reference. Pass the required arguments to the functions and display the values before and after swapping to observe the difference in behavior.
8	Create a C program that predicts whether a student will pass or fail based on inputs such as study hours, attendance percentage, and previous marks. The program should use predefined rules or thresholds to make predictions and display the result.
9	Write a program that uses functions to perform the following operations: a) Reading a complex Number b) Writing a complex number c) Addition of two complex numbers d) Multiplication of two complex numbers.
10	Write a program to define a structure for customer bank account that holds information like account number, name of account holder, balance, internet banking facility availed (Yes or No), pin code (422001 to 422013), account type (saving, recurring, deposit): a) Read account details for N customers. b) Identify the golden, silver and general customers. Golden customers: Balance > 10, 00,000. Silver Customers: Balance > 5, 00, 000 and < 10, 00, 000. General customers: Balance < 5,00,000. c) Display the list of customers availing the internet banking facility. d) Display the customers belonging to a particular geographical location depending on postal code.
11	Implement a Rock-Paper-Scissors game in C where the computer adapts to the user's behavior. The program should track the user's previous moves, analyze patterns, and attempt to predict the next move to improve its chances of winning.
12	Write a program to represent sets using pointers to one dimensional array and implement functions to perform a) Union b) Intersection
13	a) Write a program to create a file, read from it, and close the file. (Using sequential file handling Concepts). b) Write a program to read the file and store the lines in an array. c) Write a program to find the number of lines in a text file

14	Design an expert system in C that provides suggestions based on user input. The system should ask a series of yes/no questions and, based on responses, provide recommendations or conclusions using a decision-tree approach.
15	Write a program to implement type/copy command using command line arguments.
16	Implement any one of the following using AI co-pilot <ol style="list-style-type: none"> <li>1. Write a program using a class, use a constructor to initialize two numbers. Include member functions to perform the following tasks: i) To display two numbers. ii) To add two numbers. iii) Subtract one number from another.</li> <li>2. Create an application that classifies messages as spam or non-spam based on predefined keywords and scoring logic. The system should analyze input text and output classification results.</li> <li>3. Design an intelligent number guessing game where the computer predicts a number chosen by the user within a given range using an optimized search technique.</li> </ol>

<b>Prior knowledge of:</b> Computers and internet fundamentals is essential.								
<b>Course Objectives:</b>								
1. To understand the fundamental concepts of communication engineering, including data, signals, and their characteristics.								
2. To analyze data transmission techniques, modulation methods, and transmission media for efficient communication systems.								
<b>Course Outcomes:</b> After learning the course, the students will be able to:								
1. Illustrate the basics of data communication.								
2. Analyze data and signal characteristics.								
3. Design an efficient data transmission system by selecting appropriate techniques.								
4. Compare different transmission media and switching devices to study a network.								
<b>Detailed Syllabus</b>								
<b>Unit</b>	<b>Description</b>							<b>Duration (Hrs)</b>
I	<b>Fundamentals of Data communication</b> Definition, Brief history of communication engineering; Various communication applications, components in data communication- message, sender, receiver, Communication channels, Network Models: OSI, TCP/IP, set of rules (protocol), data representation, data flow, Transmission modes: simplex, half duplex and full duplex communication, The impact of AI in communication systems.							8
II	<b>Data and Signals</b> Channels and Spectrum-Definition and Types, Nyquist Bit rate, Shannon Theorem, Data –Fundamentals, Types –Analog, digital. Signals-Introduction, Classification-analog and digital, periodic, non-Periodic, Composite Signals, Sine wave. Bandwidth of a signal. Properties-Amplitude, Period, Frequency and phase, bit rate, Bit length, Wavelength, Processing–Fundamentals, Types -Time and frequency domains. Transmission Impairment-Attenuation, Distortion, Noise, Data Rate Limit, Performance metrics of data communication.							9

III	<b>Data Transmission</b> Fundamentals, Working principles, Modulation techniques and it's types, Data Conversion and it's types - Digital to Digital, Analog to Digital, Digital to Analog Modes of data transmission-parallel and serial communication: synchronous communication, asynchronous communication, multiplexing and de-multiplexing.	8
IV	<b>Transmission Media</b> Fundamentals, Types and it's characteristics - Guided Media, Un-Guided media, Switching –Fundamentals, Types and Characteristics - Circuit-switching, Packet switching, Switching devices–Fundamentals, Importance, types.	5

<b>Prior knowledge of:</b> Basic English communication							
<p><b>Course Objectives:</b> This course aims at enabling students to:</p> <ol style="list-style-type: none"> <li>1. Apply professional branding principles to technical career documentation and digital profiles</li> <li>2. Employ strategic oral communication tactics during formal recruitment and networking scenarios.</li> </ol>							
<p><b>Course Outcomes:</b> After learning the course, the students will be able to:</p> <ol style="list-style-type: none"> <li>1. Network professionally by applying self-introduction, profile building, and workplace communication etiquette.</li> <li>2. Compose professional career documents such as resumes, cover letters, and workplace reports using appropriate language and format.</li> <li>3. Articulate ideas clearly across contexts such as debates, interviews and presentations by analyzing own and peer performance.</li> </ol>							
<b>Detailed Syllabus</b>							
<b>Expt. No</b>	<b>Suggested List of Experiments</b>						<b>Duration (Hrs)</b>
1	<b>Develop a Self-Introduction and Elevator Pitch:</b> Develop and deliver a structured self-introduction suitable for professional networking.						<b>2</b>
2	<b>Write a Professional ‘About Me’ Column:</b> Write a well-structured “About Me” section in correct and formal language for a professional profile, ensuring clarity, coherence, and appropriate tone.						<b>2</b>
3	<b>Create a Complete Skills Profile for Professional Networking:</b> Draft a complete ‘Skills’ profile by effectively presenting strengths and achievements; critically evaluate peer profiles against recruiter checklists.						<b>2</b>
4	<b>Display Professional Tact and Diplomacy in Workplace Interactions:</b> Role-play scenarios: delivering constructive criticism on a peer's work, responding to negative feedback from a supervisor, communicating a project setback to a client. Analyse language choices for tone and professionalism.						<b>2</b>

5	<b>Telephone &amp; Video Call Etiquette for the Workplace:</b> Practise professional communication in phone calls and virtual meetings (Teams/Zoom): opening and closing calls, active listening without visual cues, handling technical difficulties gracefully and maintaining politeness & professionalism in hybrid work environments.	2
6	<b>Analyse Resume/CV Drafts:</b> Evaluate resumes based on clarity, relevance, formatting, and use of action verbs, and suggest improvements. Understand what develops ATS friendly resumes.	2
7	<b>Construct a Professional Resume/CV:</b> Construct a structured and well-formatted resume that highlights educational background, technical skills, projects, and achievements using appropriate language and formatting conventions.	2
8	<b>Construct a Role-Specific Cover Letter:</b> Construct a tailored cover letter aligning personal skills and experiences with job requirements using persuasive language.	2
9	<b>Learn Strategies for Workplace Meetings &amp; Minutes:</b> Participate in a simulated team meeting; practise agenda-setting and turn-taking. Write formal minutes from the discussion.	2
10	<b>Draft Technical &amp; Business Reports:</b> Practise writing short technical reports, progress reports, and business memos tailored to engineering workplace contexts. Focus on structure, objectivity, conciseness, and appropriate use of data/visuals in written communication.	2
11	<b>Using English effectively in Debates:</b> Participate in debates to express and justify opinions logically and confidently	2
12	<b>Interview Techniques (STAR Method):</b> Apply structured interview techniques to respond effectively to questions with clarity and relevance.	2
13	<b>Mock Interviews:</b> Evaluate interview responses based on clarity, confidence, and content, and provide constructive feedback.	2
14	<b>Deliver a Short Talk on a Given Topic:</b> Deliver a structured short talk on a general or technical topic, focusing on content organisation, clarity of expression, confidence, and effective verbal and non-verbal communication.	2
15	<b>Present an Integrated Professional Task:</b> Present a business proposal or idea and participate in a group demonstrating integrated communication skills.	2

**Prior knowledge of:** English Language is essential.

**Course Objectives:** This course aims at enabling students to,

1. Get familiar with the basics of German language and develop their interest in the language.
2. Develop basic German language skills for understanding and using simple expressions in everyday situations.
3. Use digital and AI-supported tools to practice German and support independent learning.

**Course Outcomes:** After learning the course, the students should be able to:

1. Interpret relevant information from spoken and written German communication.
2. Construct simple German sentences using basic vocabulary and grammatical structures.
3. Apply digital and AI-assisted tools for German phonetic skills.

### Detailed Syllabus

<b>La b</b>	<b>Activities</b>	<b>Duration (Hrs)</b>
1	<b>Reading and Matching:</b> Identify and match German words and expressions with pictures, practice pronunciation, and use the vocabulary in simple spoken and written sentences.	2
2	<b>Listening for Key Information:</b> Listen to short conversations multiple times, note key details, verify answers in pairs, and respond to follow-up comprehension tasks.	2
3	<b>Pronunciation Practice:</b> Practice German sounds through guided repetition, reading aloud, peer correction, and short speaking exercises.	2
4	<b>True/False Comprehension:</b> Read short texts, evaluate statements, justify answers, and reformulate incorrect statements correctly.	2
5	<b>Reading and Form Completion:</b> Read personal profiles or short texts, extract relevant information, and complete structured forms followed by discussion.	2
6	<b>Vocabulary Mind Map:</b> Collect topic-based vocabulary, organize it into mind maps, and use the words in short oral or written tasks.	2
7	<b>Grammar Gap-Fill Task:</b> Complete grammar exercises, identify rules used, and apply structures in new example sentences.	2
8	<b>Sentence Construction Activity:</b> Construct sentences using target verbs, expand them with additional information, and practice speaking in pairs.	2
9	<b>Error Detection and Correction:</b> Analyze sentences, identify grammatical errors, correct them, and explain the corrections collaboratively.	2
10	<b>Self-Introduction Presentation:</b> Prepare, practice, and present a short self-introduction followed by peer interaction and feedback.	2
11	<b>Question–Answer Interaction:</b> Practice asking and answering personal questions through guided drills, pair conversations, and role-switch activities.	2
12	<b>Dialogue Role-Play:</b> Read model dialogues, adapt them to new situations, rehearse, and perform role-plays in groups.	2

13	<b>Pronunciation Practice using AI:</b> Record speech using AI tools, compare feedback, improve pronunciation, and perform short speaking tasks.	2
14	<b>Dialogue Building Using AI:</b> Generate dialogues using AI support, edit language structures, rehearse, and perform communicative role-plays.	2
15	<b>AI-Supported Profile Writing:</b> draft a short profile, review AI suggestions critically, revise the text, and share final versions for discussion.	2

<b>Prior knowledge of:</b> Basic knowledge of the English language is essential.							
<b>Course Objectives:</b> This course aims at enabling students: 1. To develop understanding of storytelling elements and communication techniques. 2. To enable effective communication of ideas through creative writing and storytelling activities.							
<b>Course Outcomes:</b> After learning the course, the students will be able to 1. Illustrate storytelling elements and techniques to improve comprehension. 2. Construct business narratives to present products, services, and organizational initiatives. 3. Analyze storytelling strategies impacting communication and decision-making in business contexts.							
<b>Sr. No.</b>	<b>Suggested List of Experiments/Activity</b>						<b>Duration [Hrs]</b>
1	<b>The Bridging Session:</b> Discuss storytelling elements with reference to the short story <i>The Bet</i> by Anton Chekhov to illustrate their role in story writing.						2
2	<b>Rewriting a Turning Point:</b> Draft an alternate version of the given story by changing just that part.						2
3	<b>Basics of Storytelling:</b> Using Five Senses in a storytelling activity and elements of storytelling						2
4	<b>Dialogue Writing:</b> Writing dialogues for given situations to practice creating natural conversations that reveal character emotions and advance the narrative.						2
5	<b>What Else?</b> Analysis of a self-written story using AI for perspective, detail and improvement.						2
6	<b>Story from News:</b> Convert a news headline into a narrative.						2
7	<b>Product Journey Story:</b> Journey of a product from Idea, Design, Market Launch, Failure/Success to Customer Feedback.						2
8	<b>Customer Success Story:</b> Craft a narrative that showcases a customer's journey with your fictional business.						2
9	<b>Business Origin Story:</b> Research and narrate a significant origin of a well-known business, focusing on how storytelling played a role in shaping its image in public.						2
10	<b>Social Impact Story:</b> Develop a story that demonstrates how a business initiative or project positively impacted a community or addressed a social issue.						2

11	<b>Data to Story:</b> Convert statistical data into narrative	2
12	<b>Analysis of Story of Leaders:</b> Highlight a leader's ability to motivate, inspire, and guide a team toward success.	2
13	<b>Technical Narration:</b> Simplify technical concepts through storytelling for non-technical audiences.	2
14	<b>Ethical Decision-Making Scenario:</b> Present a complex ethical dilemma faced by a business or individual. Use storytelling to explore various perspectives and potential solutions	2
15	<b>Crisis Communication Case:</b> Examine a business crisis scenario and analyze how effective communication strategies can help restore trust and reputation.	2

## **Vision and Mission of Applied Sciences and Humanities (AS & H) Department**

### **Vision**

To provide value-added quality education that promotes essential technical skills, Critical-thinking, communication skills and human values to make impactful contributions to the society.

### **Mission**

Being a student-centric department, our mission is –

1. To develop a strong base of engineering sciences through innovative and experiential learning.
2. To provide excellent harmony of conducive environment and moral support for joyful learning.
3. To strive for overall development of students by providing the right platform to nurture all personality traits.
4. To create research attitude and endeavor innovation, creativity.

## **Vision and Mission of Information Technology Department**

### **Vision**

To become a front-runner in the western region in preparing Information Technology engineers with academic excellence and research skills empowering their roles in technology and society.

### **Mission**

1. To equip students with the skills and knowledge through a dynamic learning environment
2. To collaborate with industries to nurture proficient Information Technology Engineers
3. To cultivate a spirit of research, innovation, and entrepreneurship to address community and business challenges.
4. To imbibe work ethics and leadership skills through co-curricular and extracurricular activities.
